

Cross Case Investigation Summary

Cross-Case Investigation Summary

This document summarizes several potentially related investigation leads.

Lead A — INC-001 and INC-004:

INC-001 contains a witness statement describing a black sedan near a warehouse. INC-004 contains CCTV footage showing a black sedan near another warehouse. The two sources do not identify the license plate or driver. The shared vehicle description is therefore a possible connection, not confirmed proof.

Lead B — INC-003 and INC-006:

Both incidents occurred on River Road and involved missing construction equipment. Both investigations documented tire marks. No forensic comparison has established that the tire marks came from the same vehicle.

Lead C — INC-007 and INC-010:

Both records involve cargo or storage areas and a blue van description. INC-010 has CCTV footage of a blue van, while INC-007 has an access-log event but no working loading-area camera. The evidence suggests a possible investigative lead but does not establish that the incidents are connected.

Conclusion:

Cross-document similarities should be reported as leads unless stronger evidence explicitly confirms a relationship.
